

Guilherme Araújo

RPG / Systems Designer | Technical Designer | Software Engineer

Dublin, Ireland | +353 087 625 4021 | STAMP 4 - Full Rights to Work in Ireland | guilherme.alm.araujo@gmail.com
| <https://www.linkedin.com/in/guilhermealmaraujo/> | <https://github.com/guilhermealmaraujo>

RPG and Systems Designer with 8+ years of professional software engineering experience, combining technical problem-solving with systemic game design. Designing RPG experiences focused on exploration, player agency, reactive quests and emergent gameplay through tabletop and digital prototypes. Currently developing a systemic RPG exploration prototype in Unreal Engine 5 using Blueprints and C++.

Game Design & Development Projects

Stormwreck Isle – Systemic RPG Exploration Prototype

RPG / Systems Designer & Unreal Developer | Personal Portfolio Project | 2026

Designing and implementing a systemic RPG exploration prototype focused on player-driven discovery, environmental storytelling and reactive encounters.

- Designing and implementing a hex-based overworld connecting explorable locations through free-roam exploration and level transitions.
- Developing gameplay systems in Unreal Engine 5 using C++ and Blueprints, including hex coordinates, location tracking and exploration-state persistence.
- Designed environmental hazards and modular encounters driven by terrain, location, creature behaviour and narrative context.
- Designing traversal and risk/reward mechanics that make route selection and exploration meaningful player decisions.
- Developing the prototype toward a hybrid C++ / Blueprint architecture, with core gameplay logic in C++ and designer-facing configuration exposed through Blueprints.

Avernus – Systemic RPG & Quest Design Project

RPG / Systems / Quest Designer | Personal Project | 2024–2026

Redesigned and expanded a D&D campaign into a systemic RPG experience focused on exploration, player agency, reactive quests and emergent gameplay.

- Designed branching quests and encounters supporting multiple approaches including dialogue, exploration, skill-based solutions, combat and avoidance.
- Designed interconnected main quests, character quests and optional content, integrating character backstories, NPCs, discoveries and world lore into gameplay objectives and progression.
- Created persistent consequences and world-state changes based on player decisions, including NPC relationships, reputation, rewards and future encounter conditions.
- Designed explorable hubs with optional NPC interactions and side quests that influence negotiation outcomes, resources and progression.
- Designed systemic hexcrawl mechanics including travel, navigation, resource management, environmental hazards and dynamic encounters.

Professional Experience

Software Developer – Client Integrations | Flip-Pay

Dublin, Ireland | Nov 2022 – Present

- Implement and support client integrations by configuring the Flip-Pay platform and adapting front-end and back-end components to meet client requirements.
- Analyse client requirements and existing system capabilities to identify appropriate technical solutions and determine when product changes or additional development are required.
- Investigate integration issues through code analysis, debugging and troubleshooting, implementing bug fixes and minor improvements when required.
- Collaborate with clients and internal development teams to translate business requirements into technical solutions using JavaScript, Angular, C#, .NET and APIs.

Software Developer – NoFrixion

Dublin, Ireland | Apr 2022 – Aug 2022

- Developed and maintained financial web applications and APIs using C#, .NET Core, Entity Framework, TypeScript and SQL Server.
- Worked with third-party API integrations and automated integration/unit testing.
- Collaborated within a small development team using Git, Jira and Agile development practices.

Tech Lead | Software Developer – FitBank 450

Fortaleza, Brazil | Jun 2021 – Mar 2022

- Developed and maintained large-scale financial systems, APIs and microservices using C#, ASP.NET MVC, JavaScript and SQL Server.
- Led a team of Junior Developers and Quality Analysts, supporting technical decisions and software delivery.
- Contributed to the implementation of Brazil's PIX instant-payment system, with responsibility for the QR Code component.
- Worked with Git, Azure DevOps and Jenkins across development, project management and deployment.

Software Developer – Tactium

Fortaleza, Brazil | Feb 2021 – Jun 2021

- Developed CRM applications, features and API integrations using C#, .NET and JavaScript.

Software Developer – Wipro

Fortaleza, Brazil | May 2019 – Dec 2020

- Developed enterprise applications and industrial automation software using C#, .NET and JavaScript.
- Collaborated across development teams and business departments.

Junior Software Developer – ND Engenharia e Software

Fortaleza, Brazil | Jan 2018 – Apr 2019

- Developed laboratory-management applications using Delphi, C# and .NET.

Assistant Project Manager – Poligono Ambiental

Fortaleza, Brazil | Jun 2015 – Dec 2017

- Supported technical design and project delivery, developing automation tools for structural calculations and cost estimation.

Software Developer Intern – Xlung

Fortaleza, Brazil | May 2014 – May 2015

- Developed an educational web application using Ruby on Rails, HTML and CSS.

Education

Bachelor's Degree in Computer Science

Ceará State University (UECE) - Fortaleza, Brazil | 2009 - 2017

International Exchange Program - Computer Science

Iowa State University (ISU) - Ames, IA, USA | 2012 - 2013

Languages: Portuguese: Native | English: C2/ Fluent

Technical & Game Development Skills

Game Design: Systems Design, RPG Design, Quest Design, Exploration Design, Encounter Design, Player Choice & Consequence, Rapid Prototyping.

Game Development: Unreal Engine 5, Blueprints, C++, Gameplay Prototyping, Hex/Grid-Based Systems.

Tools: Git, GitHub, Visual Studio, VS Code, Jira, Azure DevOps.

Programming: C#, C++, Object-Oriented Programming, JavaScript, TypeScript, .NET, SQL.

Software Engineering: Software Architecture, API Integration, Unit/Integration Testing, CI/CD, Agile/Scrum.
